/Albert K Wong/ Primary Examiner, Art Unit 2612 Continuation of 11, does NOT place the application in condition for allowance because: applicant's remarks are not persuasive. Applicant has argued that either reference does not teach all of the claimed limitations. However, the nature of a 103 rejoic on requires that each reference is incomplete with respect to the claim limitations. Breed teaches a passive RFID sensor which is typically powered by an interrogator with an antenna. Further, a RFID device has an antenna to transmit a signal to the receiver/interrogator. Thus, the only issue is the location of the antenna. One of ordinary skill in the art would recognize that a variety of position is suitable for location of the antenna. The knuckle provides a stable location as well as a good transmission point. A person would recognize that the location or orientation of an antenna may be adjusted to improve reception. Further, applicant argues that since the location is critical it would not be appropriate to solely rely on case law. First, the EXaminer is not solely using case law but applying the principes of common sense and common knowledge. Second, the EXaminer is relying on scientific principles. In particular, the theory of electromagnet theory. The location and orientation of an antenna is known to be critical for proper signal transmissions.
